

A Requirements

This appendix contains the omitted non-function requirements which are all based on the Lighthouse 10 scoring.

A.0.1 Usability

- The accessibility score of Google devtools' Lighthouse must be 95 or above. This score is highly impacted by the contrast ratio between foreground and background elements being 7:1 or higher. The score is impacted by other metrics with similar restrictions.
- The UI must practice error prevention to minimize the relevance of error handling.
- The system must provide clear error messages.

A.0.2 Reliability

- The user must be able to scan ingredients when offline.
- The user must be able to view their saved recipes when offline.
- The system must be fault tolerant on a UI level, having the ability to continue when one or more components fail.
- The computer vision model must have a validation accuracy of at least 70%.
- Upon classification, the computer vision model must have a confidence of at least 70%.

A.0.3 Performance

- The First Contentful Paint must be 1,8 seconds or faster, making the system snappy.
- The Largest Contentful Paint should be 2,5 seconds or faster, ensuring the best user experience possible.

A.0.4 Supportability

- The system must be installable on iOS and AndroidOS.
- The system should be usable as a web application in the user's browser.
- The machine learning model must run on the users device and not through a server.
